

I am learning to:

- show the value of three-digit numbers on a number line
- apply my place value knowledge.

Put each number from the boxes in the correct place on both of the number lines underneath.

300 250 150

100 200 400

190 350 450

What number is the place value equipment showing? Write the number in the roof of the place value house, then underneath write how many hundreds, tens and ones are in that number.
